

PROJECT REPORT AND SURVEY GUIDELINES

DFD40143 – MOBILE APPLICATION DEVELOPMENT

As part of your project assessment, each group is required to prepare a **comprehensive project report** and conduct a **survey** to evaluate the effectiveness and usability of your proposed solution. The report should demonstrate your ability to identify problems, develop solutions, implement your ideas, and evaluate the final outcome.

Your report should include the following sections.

1. Introduction

Introduce your project by explaining its background, objectives, and the motivation behind developing the system or application. Briefly describe the importance of the project and the expected benefits for users.

2. Problem Identification

Clearly explain the problem that your project aims to solve. This section should identify the issues, challenges, or conflicts that exist in the current situation.

You should include:

- Background of the problem
- Current issues faced by users
- Why the problem needs to be solved
- Project objectives

3. Problem-Solving Process

Describe how your team approached the problem by discussing the following:

3.1 Identify the Problem Factors

Explain the main causes and contributing factors of the identified problem.

3.2 Data Analysis

Present the information gathered through observations, interviews, questionnaires, or other research methods. Analyse the findings to support the need for your proposed solution.

3.3 Application of Knowledge and Ideas

Explain the programming concepts, technologies, theories, or techniques applied in developing the project.

3.4 Information Collection

Describe how information and data were collected to support decision-making and project evaluation.

4. Decision Making

Explain how your team selected the best solution among several possible alternatives.

Include:

- Alternative solutions considered
- Comparison of alternatives
- Justification for choosing the final solution

5. Concept Development

Describe the process of transforming ideas into the proposed system.

Include:

- Brainstorming process
- System concept
- Flowchart or workflow
- System architecture (if applicable)

6. Solution Development

Explain how the proposed solution was designed.

Include:

- System design
- User interface design
- Database design (if applicable)
- Algorithms or program logic

7. Implementation

Describe the implementation of your project.

Include:

- Development process
- Programming language(s)
- Software and hardware used
- Testing activities
- Challenges encountered and how they were overcome

8. Evaluation and Selection

Evaluate the effectiveness of the completed project.

Discuss:

- Whether the project objectives were achieved
- Strengths of the system
- Limitations of the system
- Suggestions for future improvements

9. Survey and User Feedback

Conduct a survey involving potential users to evaluate your project.

The survey should include:

- Respondent information
- Survey questions
- Data collected
- Charts or graphs showing the results
- Analysis and interpretation of the findings
- Overall user satisfaction

Summarise how the survey results support the effectiveness of your project.

10. Integration

Explain how different components of the project work together.

Examples include:

- Integration between hardware and software
- Integration of system modules
- Integration of users, databases, and technologies

11. Project Development

Describe how the project evolved throughout its development.

Include:

- Improvements made
- Features added
- Problems solved during development
- Lessons learned

12. Innovation / Creation

Explain the originality of your project.

Describe:

- The innovative features introduced
- What makes your solution different from existing solutions
- The value created by your project

13. Conclusion

Summarise the entire project by highlighting:

- The problem addressed
- The solution developed
- Project achievements
- Future recommendations

Appendices

Include supporting documents such as:

- Survey questionnaire
- Survey results
- Source code (selected sections)
- Screenshots of the system
- Testing evidence
- References

Report Format

- Language: **English**
- Font: **Times New Roman**, Size **12**
- Line Spacing: **1.5**
- Page Number: Bottom centre
- Include appropriate headings and subheadings.
- Insert figures, tables, and charts where necessary.
- All references must follow **APA 7th Edition** format.

Assessment Focus

Your report will be assessed based on your ability to:

- Identify and analyse a real-world problem.
- Apply appropriate knowledge and programming concepts.
- Generate and justify suitable solutions.
- Develop and implement the proposed system.
- Evaluate the effectiveness of the project using survey findings.
- Demonstrate creativity, innovation, and continuous improvement throughout the project development process.

A well-written report should clearly explain **how the problem was identified, how the solution was developed, how it was implemented, and how the survey findings validate the effectiveness of the final project.**
